

# HPC Exam Project

## Hybrid MPI/OpenMP 5-Point Stencil: Performance and Scalability Study

Giovanni Lucarelli

January 23, 2026

**UNIVERSITÀ  
DEGLI STUDI  
DI TRIESTE**

# Introduction

---

# Goals

1. **Parallelize** using hybrid (MPI, OpenMP) approach the stencil method for the 2d heat equation
2. Perform **scalability** study:
  - 2.1 Thread scaling
  - 2.2 Strong scaling
  - 2.3 Weak scaling

Heat equation (2d)

$$\partial_t u = \alpha(\partial_x^2 u + \partial_y^2 u)$$

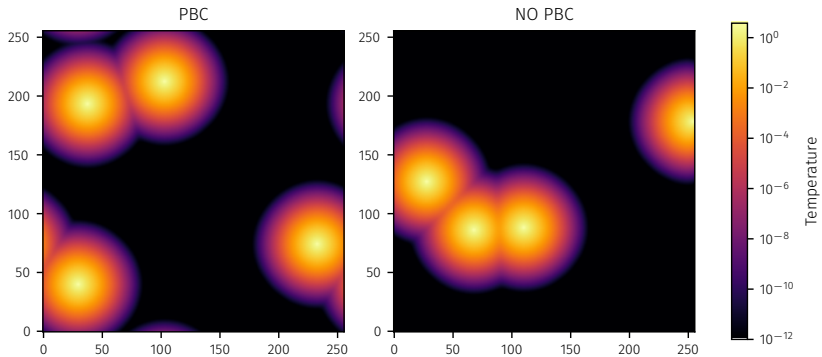

Finite difference integration (5-point stencil method)

$$u_{i,j}^{(t+1)} = (1 - 4\alpha)u_{i,j}^{(t)} + \alpha \sum_{\langle i,j \rangle} u_{i,j}^{(t)}$$

$$x \in [0, L_x] \rightarrow i \in \{1, \dots, N_x - 1\}$$

$$y \in [0, L_y] \rightarrow j \in \{1, \dots, N_y - 1\}$$

# Code Correctness

# Build Configuration

```
1  CC      = mpicc
2  CFLAGS  = -O3 -Wall -fopenmp -march=native
3  TARGET  = stencil_mpi
4
5  ENABLE_OUTPUT ?= 0
```

# Parallelization: shared memory

## Implementation

```
1      #pragma omp parallel for schedule(static)
2      for (uint j = 1; j <= ysize; j++){
3          for ( uint i = 1; i <= xsize; i++){
4
5              // update rule
6
7          }
8      }
```

## Thread placement

```
1      export OMP_PLACES=cores
2      export OMP_PROC_BIND=close
```

# Touch-by-all policy

```
1 int memory_allocate ( ... ){
2
3     planes_ptr[OLD].data = (double*) malloc(frame_elems * sizeof
        (double));
4     planes_ptr[NEW].data = (double*) malloc(frame_elems * sizeof
        (double));
5
6     #pragma omp parallel for schedule(static)
7     for (int j = 0; j < Ny + 2; ++j){
8         for (int i = 0; i < Nx + 2; ++i) {
9             size_t idx = (size_t)j * (Nx + 2) + i;
10            planes_ptr[OLD].data[idx] = 0.0;
11            planes_ptr[NEW].data[idx] = 0.0;
12        }
13    }
14 }
```

# Parallelization: distributed memory

# Parallelization: distributed memory

# Parallelization: distributed memory

For each task:

```
1  // pack buffers
2
3  MPI_Irecv(...);
4
5  MPI_Isend(...);
6
7  update_internal();
8
9  MPI_Waitall();
10
11 // unpack buffers
12
13 update_border();
```

# Results

```

# Strong Scaling (1/4)

```
1  GRID_SIZE_X=16384
2  GRID_SIZE_Y=16384
3  N_STEPS=500
4
5  OMP_THREADS=14
6  N_TASKS_PER_NODE=8
7
8  NODES="1 2 4 8 16"
```

Computation  $\gg$  Communication !

# Strong Scaling (1/4)

# Strong Scaling (1/4): Analysis

- 8 MPI tasks per node  $\rightarrow$  one per **NUMA region**
- larger number of nodes  $\rightarrow$  larger number of tasks  
(8  $\rightarrow$  128)  $\rightarrow$  smaller (local) grid size
- for 16 nodes (128 tasks as  $16 \times 8$ ), size  $N_x = N_y = 2^{14}$

$$mem_{128} = \frac{2^{14}}{16} \times \frac{2^{14}}{8} \times 16B \approx 33.5MB$$

```
1 [glucarel@lrndn4293 HPC-leonardo]$ lscpu | egrep 'L1d|L1i|L2|L3'
```

2	L1d cache:	48K
3	L1i cache:	32K
4	L2 cache:	2048K
5	L3 cache:	107520K

**Superlinearity** from cache effects exploitation!?<sup>1</sup>

---

<sup>1</sup>If the grid is small enough

# Strong Scaling (2/4)

- 1 GRID\_SIZE\_X=16384
- 2 OMP\_THREADS=112
- 3 N\_TASKS\_PER\_NODE=1

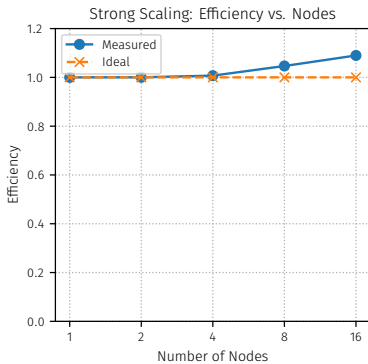

## Strong Scaling (2/4): Analysis

- 1 MPI tasks per node  $\rightarrow$  lower number of tasks  
(1  $\rightarrow$  16)
- for 16 nodes (16 tasks as  $4 \times 4$ ), size  $N_x = X_y = 2^{14}$

$$mem_{16} = \frac{2^{14}}{4} \times \frac{2^{14}}{4} \times 16B \approx 268MB$$

# Strong Scaling (3/4)

- 1 GRID\_SIZE\_X=32768
- 2 OMP\_THREADS=14
- 3 N\_TASKS\_PER\_NODE=8

# Strong Scaling (4/4)

- 1 GRID\_SIZE\_X=65536
- 2 OMP\_THREADS=14
- 3 N\_TASKS\_PER\_NODE=8

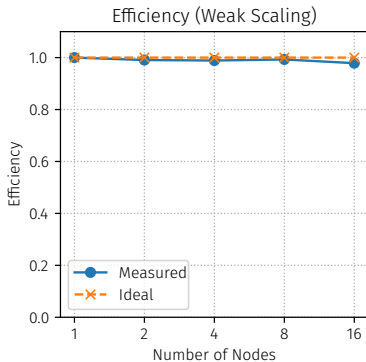

# Weak Scaling

```
1  LOCAL_X=4096
2  LOCAL_Y=4096
3  OMP_THREADS=14
4  TASKS_PER_NODE=8
5
6  for NODES in "1 2 4 8 16"; do
7      TOTAL_TASKS=$(( NODES * TASKS_PER_NODE ))
8
9      case "${TOTAL_TASKS}" in
10         8)    PX=4; PY=2 ;;    # 1 node (8 ranks)
11         ...
12     esac
13
14     GRID_SIZE_X=$(( LOCAL_X * PX ))
15     GRID_SIZE_Y=$(( LOCAL_Y * PY ))
16     ...
17 done
```

# Weak Scaling

# Conclusion

---

# Conclusion

## Key findings

- MPI communication time is small compared to the stencil update
- OpenMP efficiency decreases at high thread counts (likely memory-bandwidth / NUMA limited)

## Possible improvements

- Enable/verify SIMD vectorization of the stencil kernel
- Use MPI derived datatypes or optimized packing/unpacking
- Explore alternative schemes (e.g., higher-order stencils) and their performance/accuracy trade-offs

Thank You!
